MK 19 / 19S

Automatic button shank wrapping machine

Table Mounted Wrapping Head For Tandem Operation With Under Table Control Unit

The most efficient button wrapping machine in the world that can use any thermo fusible button wrapping thread- DON'T get trapped into buying an RFID equipped system that will lock you into one thread supplier.

MK 19 shown mounted on a table next to a BAT 18 Jacket button attaching machine.

Thread saving - revolutionary design to reduce thread waste
= up to 25% reduction in waste giving a significant number extra buttons per cone over any other button wrapping machine.

Automatic waste extraction
= less downtime due to cleaning and maintenance.

Unique high speed threading of machine
= simple and fast change of colours

App control
= user friendly machine control, diagnostics, production data etc. from a mobile phone

The APP home screen enables the operator or technician to access one of three different preset programs. Displayed to the right of the button picture are the number of wraps currently selected. The gauge shows the current temperature reading of the heating fork. On the top left is displayed a cycle timer and the top right is the batch counter.

Various other screen can be easily accessed. This screen shows the diagnostics page for the thread bonding device. By touching the various components on the screen the actual components will move inside the machine. Other screens give the possibility to pre set the 3 programs, alter the bonding time and update the software. Many more features will be built in as time goes on and these will be updateable via the MMS APP.
