ag

A standard model for sewing plain and 3-step zigzag which is ideal for large production volumes.

## Seams with attractiveness and accuracy

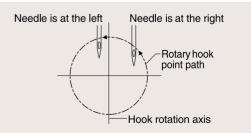

## Softer sewing finishes with improved quality

In order to provide a much softer sewing finish even with weaker thread tensions, the needle and rotary hook timing and the shape of the rotary hook and thread take-up lever have been changed, and the thread path has been improved. These changes ensure that this sewing machine provides the same stable and high-quality sewing finishes as electronic zigzag stitchers.

## Trouble-free hook shaft offset mechanism

This mechanism prevents the skipped stitches and thread breakages which can occur particularly when the needle is at the right zigzag position. At the same time, it improves maintenance by making it easier to adjust the rotary hook timing, and also prevents the rotary hook tip being damaged by the needle guard.

The rotating axis for the rotary hook has been moved away from the center of the zigzag pattern. As a result, the tip of the rotary hook uniformly picks up the upper thread at the needle hole regardless of whether the needle is at the left or right.

## High-durability titanium-coated rotary hook

The inner rotary hook has a titanium coating that boosts the rotary hook's heat resistance, so that less oil needs to be supplied for lubrication. This eliminates problems with oil staining the thread and contaminating the material.

## Stable small-amount lubrication for rotary hook

A unique oil valve method (patent pending)has been adopted in the rotary hook lubrication mechanism, making it possible to supply small amounts of oil to the rotary hook in stable.

## Easy operation and setting

## Adoption of a reference line adjustment lever

The zigzag reference line and zigzag width can be changed easily by operating a lever. This design makes operation much easier, and the reference line adjustment lever also includes a lock nut which allows fine adjustments to be made easily.

## Easy presser foot pressure adjustment

The presser foot adjustment screw has scale markings which serve as a guide for adjusting the presser foot pressure. In addition, it is also large in size and easy to operate.

#### Adjustment dial for condense stitch settings

A new condense dial has been added. This makes it much easier to make condense stitch settings.

## Options

#### Presser bar

This is the separate type presser bar for using the presser foot for lock stitchers.

## Thread tension assy (disc type) / Tension release pin

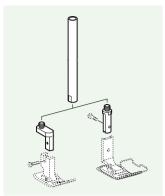

The difference in thread tightening depending on sewing speed when ladies wear and knitted garments are sewn is more reduced.

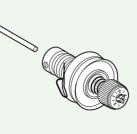

#### Thread guide, F / Felt

Prevents upper thread flapping causing skipped stitches and thread breakage when sewing coarse materials.

#### Rotary hook (carbidereinforced hook tip) This prevents the hook tip from becoming work and thus

becoming worn and thus increases rotary hook durability.

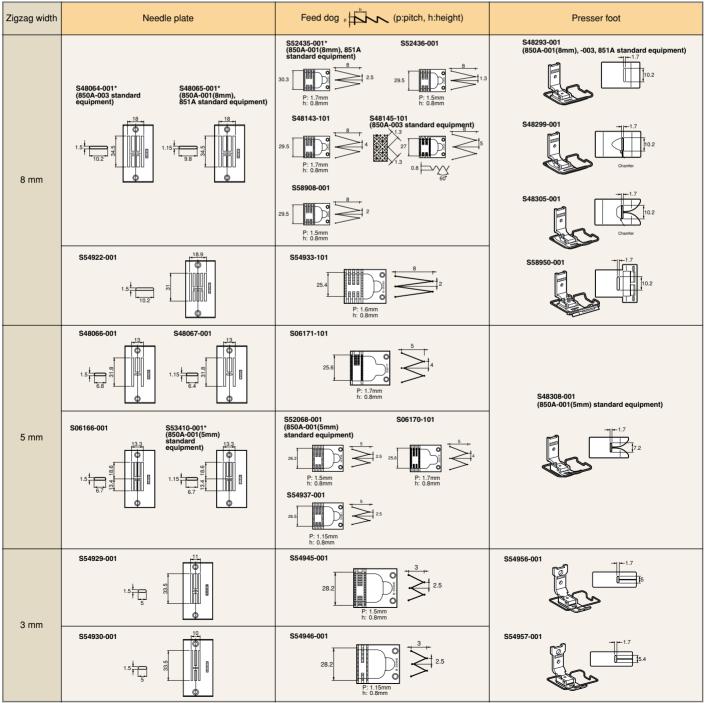

## Gauge parts (850A/851A)

• For -001 specifications, max. feed amount is 2.5mm.
